Blue Dream Autoflower	Auto	SATIVA	17%	0.10%	Blue Dream x Ruderalis	8 - 11 weeks	110 cm	600gm/m2	Blue Dream Auto Feminized is a mostly sativa (75%) auto-flowering member of the 'blue' family of cannabis. Blue Dream Auto promises growers some very nice yields of high THC bud. Plants grow just over a metre tall and should be fed quite sparingly, around a quarter of recommended quantity. Other than that it is pretty straightforward to grow although it is a thirsty strain and will drink plenty. It is recommended to trim the lower stem of straggly growth and to carefully prune/defoliate some other leaves to improve airflow through the plan
Blueberry Autoflower	Auto	INDICA	High	1%	Blueberry x Ruderalis	62 - 67 days	70-80cm	Up to600 gram/2	Blueberry Auto is a beautiful mixed cross of a Lowrider #2 male an original Blueberry mother. The resulting plant is a vigorous, potent, auto-flowering strain with excellent side branching. Although some of the blue hues from the mother have been lost in the cross, this strain retains its mothers fruity taste. Indoors, these plants stay quite short at around 90 cm, taking between 60 - 90 days from seed to complete its life-cycle. Yields are good and growers can expect around 450 gm/m2. Outdoors, plants grow a bit taller at between 110 - 130
Bruce Banner Autoflower	Auto	INDICA	15% - 20%	1% -2%	Bruce Banner x Ruderalis	70 days from seed	65-150 cm	28g/m/m meter. Outdo	Bruce Banner Auto is a cross between Bruce Banner and ruderalis. This version is auto-varied being something of a monster plant in character if not in size being quite short and stocky yet producing plenty of dense, resinous buds that will make you drool in anticipation of delights to come. Bruce Banner Auto will reach a height of approximately 150 cm, tall, sweating a little more. As an auto flowering strain plants will complete their life-cycle successfully whether grown indoors or outdoors. Autoflo cycle, totalling no more than 10 weeks fr
Cheese Autoflower	Auto	HYBRID	18%	1%	Cheese x Lowrider #2	10 Weeks Seed to flower	78 in	1 - 3 oz/ft²	Cheese Autoflowering breathes new life into the Cheese family. This next generation autoflowering hybrid is not merely a rushed cross of any Skunk and any ruderalis. Rather Cheese Autoflowering is the product of the fusion of a mega production Critical's Auto and an original old school Cheese clone. Cheese Autoflowering was purposefully bred to rival contemporary photoperiod cannabis strains, not just other auto. Unlike most ruderalis, Cheese Autoflowering will easily top 1m in height indoors and branch pretty well. This larger struc
Cream Caramel Autoflower	Auto	INDICA	18%	1.60%	Cream Caramel x Ruderalis	60-65 days from seed	40 - 90 cm	350-550gm/m2	Cream Caramel Auto is an indica-dominant hybrid that has had ruderalis genetics added in order to provide auto-flowering properties. It is a high-yielding, pest-resistant strain which has high medicinal value. Indoors plants take between 60 - 65 days to complete the entire life-cycle from germination through to harvest with yields falling in the range 350 - 550 g/m2. Outdoors plants grow no taller than 90 cm, often shorter, and will be a bit faster to mature. 8 weeks is a good average. Yields per plant are between 35 - 100 gr. Cream Caramel
Critical Autoflower	Auto	INDICA	20%	0.50%	Critical x Ruderalis	68-72 days from seed	100 - 140 cm	350-450gm/m2	Critical Auto is a high-yielding strain with good resistance to mould, pests and plant diseases. It makes a good novice grower's strain. Indoors it grows to a height of 55 - 65 cm, taking 68 - 72 days to complete its life-cycle and yielding 450 gr/m2 if given 18/20 hours of light per 24. Outdoors it grows taller, 80 - 90 cm, yielding 150 gr/plant. Critical Auto's dense buds have a strong Skunk scent and it is therefore recommended to use carbon filters to get rid of the smell if growing indoors near to neighbours. Its taste is sweet, earthy citrus. Tl
Do-Si-Do Autoflower	Auto	INDICA	20% - 23%	1%	Do-Si-Dos x Ruderalis	70 - 80 days from seed	up to 130 cm	500 - 700gr/m2	Do-Si-Dos Auto is the auto-flowering, indica-dominant hybrid produced by crossing Do-Si-Dos with an unnamed auto-flowering strain. An easy to grow plant that produces very high levels of THC with good potency, good yields and a very tasty flavour. Grown indoors, plants stay quite short at 90 cm, or thereabouts, taking between 70 - 80 days from seed to harvest. Yields are high and will be about 400 - 450 gr/m2. Outdoors, plants end up a little taller at 110 - 130 cm. In good conditions each plant can produce up to 150 gr. Do-Si-Dos Au
Fruity Pebbles Autoflower	Auto	INDICA	25%+	1%	Green Ribbon x GDP x Tahoe Alien	60-75 days	100-200cm	High (450-750gr/plan	Looking for an autoflower strain with a taste as delightful as your favorite cereal? Look no further than Fruity Pebbles, also known as Fruity Pebbles OG. This highly sought-after hybrid, derived from Green Ribbon, Granddaddy Purple, and Tahoe Alien, promises a tropical, berry flavor reminiscent of the cereal it's named after. Our autoflowering cannabis seeds make cultivating this gem a breeze, offering both flavor and reliably high THC levels. Whether you're seeking stress relief or battling insomnia, FPOG's euphoric effects have you co
Gelato Autoflower	Auto	HYBRID	24.0 - 26.0%	1%	Gelato x Ruderalis	53-65 days	70-80cm	450 - 550 gr/m²	Gelato Auto has a very high THC content, about 26%. The variety has an energetic, uplifting effect, perfect for creative activities. It helps with depression and insomnia. Gelato Auto grows to 120 cm in 8-9 weeks and has an Indica-like structure.
Girl Scout Cookies Autoflower	Auto	INDICA	20% - 22%	0.4% - 0.6%	GSC x Ruderalis	70 days from seed	75-150cm	Indoors: 500 - 600 gr	Girl Scout Cookies Auto Feminized Seeds is a 60% indica auto-flowering plant which boasts good yields, high levels of THC and a deliciously more-ish taste. This is a great choice to grow if you want to make extractions and concentrates due to its high level of resin.This plant enjoys higher nutrient levels (EC in hydroponics) than the average plant is happy with. Indoors yields between 500 - 600 gr/m2may be harvested in 10 weeks or fewer from seedOutdoors each plant is able to yield anywhere from 70 gr. to 100 gr. Cleaning in no mea
Godfather OG Autoflower	Auto	HYBRID	25%+	<2%	Godfather OG x Ruderalis	55-65 days	4-5 ft	Up to 550 gr	There's an inherent sense of comfort in the name "Godfather", and the Godfather OG Autoflowering marijuana seeds live up to that expectation. This strain is cherished for its knack for inducing relaxation in users. Typically recommended for seasoned cannabis enthusiasts, Godfather OG Auto boasts an impressively high THC content, occasionally reaching up to 25 percent. True to its reputation, the Godfather OG Auto delivers a potent and sedative high. Initially, users may experience feelings of joy, euphoria, and lightness, but as the h
Gorilla Glue #4 Autoflower	Auto	INDICA	25%	0%	Gorilla Glue 4 x Ruderalis	70-75 days from seed	60-150cm	600gr/m2	Gorilla Glue Auto is an indica-dominant auto-flowering plant that was bred by crossing Gorilla Glue with an auto-flowering strain containing ruderalis genetics. Buds become incredibly sticky and the resin has obvious glue qualities. A medium-sized plant at 70 - 100 cm, tall, Very high levels of THC production, buds are full of resin. You'll get some wonderful flavor profiles, such as coffee, some citrus, pine and earthy tones. Often used for pain, insomnia and muscle spasms.
Green Crack Autoflower	Auto	SATIVA	20%	0.75%	Green Crack x Ruderalis	63-70 days from seed	60-90cm	300 - 600gr/m2	Green Crack Auto is the sativa-dominant hybrid auto-flowering version of the popular Green Crack strain. Green Crack Auto has added ruderalis genetics and is a great plant for the beginner to grow, while also appealing to the discerning connoisseur consumer. Green Crack Auto is quick to cultivate, and has a grow-cycle from seedling to harvest of just 8 - 9 weeks. In a short space of time growers will be able to obtain high yields indoors and outdoors. These plants reach a height of 60 - 90 cm, so even the larger plants amongst your gro
Jack Herer Autoflower	Auto	Sativa Dominant	15%	2%	Haze x Northern Lights #5 x Skyl	63 days from seed	65-150 cm	350 - 450 gr/m2	Jack Herer Auto is a sinsemilla sativa-dominant auto-flowering strain. It produces good yields, is resistant to a range of plant diseases and has medicinal value. Indoors Jack Herer Auto grows to 90 - 100 cm, tall producing yields of 450 - 500 gr/m2 in a life cycle of between 65 - 70 days. Outdoors the yield will be about 600 gr/plant. Its taste is sweet and peppery. THC production is 16% with 0.5% CBD. The effect has good potency.
Northern Lights Autoflower	Auto	HYBRID	16%	1%	Northern Lights x Lowrider 2	59-63 days from seed	41 in	150-250gr/m2	Northern Lights Auto is a hybrid cross of Northern Lights and Lowrider #2. It is approximately 75% indica with the genetic balance provided by ruderalis. This strain produces good yields of dense indica buds coated with resin and is an easy-to-grow plant that displays great consistency. Flowering takes off during week three and lasts for a further six weeks or perhaps a little more giving a total grow time of between 8.5 - 9 weeks. Northern Lights is a plant that does not smell as much as many other strains and is therefore suitable for stea
OG Kush Autoflower	Auto	HYBRID	17% - 21%	0.10%	OG Kush x Ruderalis	70 - 75 days from germination	60 - 90 cm	Outdoor yield 25-50 g	OG Kush Auto does well both indoors and outdoors provided the climate of the area is not very humid and yields compact buds coated in a fragrant resin.
Original Skunk #1 Autoflower	Auto	INDICA	20%	1%	White Russian x Lowrider 2	70 days from seed	80-100cm	Up to550gm/m²	This plants mostly an indica, but the effect is a good blend of an uplifting sativa buzz with the physical stone of an indica. Yet, it isn't a "heavy" stone by any means. Enjoy a carefree happy buzz.
Purple Haze Autoflower	Auto	HYBRID	18%	0.05%	Purple Haze x Ruderalis	70-75 days from seed	0.60 to 1.2m	Indoor: 350 to 500gr/	Purple Haze Auto Feminized is a sativa/indica hybrid strain. It is known to be resistant to a range of plant diseases, is a good producer and also has therapeutic value. Indoors Purple Haze Auto will produce yields of 400 gr/m2 from plants that reach 60 - 100 cm, tall in a total growing time of 70 - 75 days. Outdoors these plants do not grow any taller than indoors but will produce as much as 250 gr each. The scent and taste are sweet, fruity and with some earthy notes. THC production is high at 17% with less than 0.5% CBD. The effect is
Purple Punch Autoflower	Auto	INDICA/HYBRID	20%+	1%	Granddaddy Purple x Larry OG x	64 days from seed	70-80cm	Indoors: 450 - 600 gr	Purple Punch Auto is a larger than average auto-flowering strain that is approximately 85% indica in genetic composition. It has a fast grow-cycle and produces exceptional yields for an auto strain strong withstanding high THC levels. Purple Punch Auto thrives both indoors and outdoors growing to a height of 60 - 150 cm, depending on environment and conditions. In just 8 weeks from seed growers can harvest between 450 - 600 gr/m2 indoors while outdoor-grown plants will provide 80 - 200 gr each. Buds are dense and frosty with a
Runtz Autoflower	Auto	INDICA	25%+	Unknown	Runtz x Ruderalis	approx. 75 days from seeds	Indoors: 100 - 120 cm	600 gr/m2	Runtz is a highly sought-after Cookies family strain which results from the cross of Gelato #33 and Zkittlez. Runtz is usually only available in clone form but Elev8 have sourced the original genetics that comprise the hybrid and therefore gives rise not only to plants identical to Runtz but also to a few heavily Runtz-leaning phenotypes. Runtz is indica-dominant, taking 8 - 9 weeks to complete the flowering cycle. Its scent and flavour are very reminiscent of the fruity, candy snacks of the same name. The plants themselves are very attractive
Skywalker Autoflower	Auto	Sativa Dominant	25%+	1%	Skywalker Kush Cut x Triangle F2	90 days	100-200cm	450-600gr/m2	Skywalker Auto combines the high yield and potency of Mazar genetics with the delectable flavor of Blueberry, resulting in a truly unique plant. While most plants exhibit traits of both parent strains, some may lean more towards either Blueberry or Mazar. These plants typically grow in a bushy Christmas tree shape, requiring ample space to flourish.
Sour Diesel Autoflower	Auto	HYBRID	17%	0.10%	Auto Haze x New York City Diesel	63-70 days from seed	1 - 1.5m	Outdoor yield 35-75 g	This plant has a mild, pleasant aroma of citrus fruit and wood. The flavor is dominated by the taste of Diesel and sour fruit. Strong cerebral sativa, with elevated THC levels, so you would expect from the genetic lines of its parents. Plants grow fairly tall with healthy auto yields.
Wedding Cake Autoflower	Auto	INDICA	25%	0.50%	Wedding Cake x Auto	70 - 75 days from seed	up to 110 cm	350-750gr/m2	Wedding Cake Auto Feminized is a 60% indica cannabis strain derived from the great Cali success of the last few years, viz. Wedding Cake. This auto-flowering version is a trichome-covered, deliciously mouth-watering addition to our range of bulk seeds. Wedding Cake Auto is at home growing indoors and outdoors, although in the case of the latter growing environment it is naturally more at home in warmer climate regions. From seed to harvest takes 10 - 11 weeks with resulting high yields. Growers can expect to obtain around 500 gr
White Widow Autoflower	Auto	INDICA	High	1%	White Widow (Indica x Brazilian)	60-65 days seed to flower	70-80cm	35-125 gr/plant	These White Widow Auto Feminized Seeds vary somewhat from the norm, being bred using the potent indica-dominant strain known as White Russian and crossing it with Lowrider #2. White Russian itself is a hybrid strain which was bred from AK47 and a select clone of a White Widow plant from the 1990s. The inclusion of White Russian genetics adds to the potency of this White Widow Auto strain. As with the vast majority of auto-flowering strains this one will grow in all environments, even outdoors in the short, cool summers of North
